

Net of a triangular prism

Given below is a triangular prism. Draw a net for the triangular prism by including the edge lengths in the picture.

Look below, all the faces of the above triangular prism have been separated. This will help you to see all the five faces of the prism and their locations.

Below is the net of the above triangular prism. Notice that the above prism got two triangular faces and three rectangular faces (rectangles appears parallelograms because of three dimensions)
